

**Amendments To The Claims**

1.(currently amended)     ~~Computing apparatus~~ A server programmed to transmit an image editing program and a lower resolution proxy of a higher resolution image to a client, the image editing program including programming to generate ~~generating~~ a batch of commands corresponding to edits made on the proxy.

2. (currently amended)     The ~~computing apparatus~~ server of claim 1, further programmed to await the receipt of a batch of commands from the client.

3. (currently amended)     The ~~computing apparatus~~ server of claim 2, further programmed to receive a batch of commands from the client and use the batch of commands to edit the higher resolution image ~~version of the proxy~~.

4. (currently amended)     The ~~computing apparatus~~ server of claim 3, further programmed to store the batch of commands that have been received from the client as an edit history.

5.(currently amended)     The ~~computing apparatus~~ server of claim 4, further programmed to wherein the computing apparatus uses ~~use~~ the edit history to roll back changes in response to a request by a the client

6 -7. (canceled)

8.(currently amended)     A server comprising:  
                              means for transmitting a lower resolution proxy of a high higher resolution image to a client; and  
                              means for transmitting an image editing program to the client, the image editing program including programming to generate ~~generating~~ a batch of commands when used to edit the proxy.

9-10.(canceled)

11.(currently amended) A network client programmed to perform image edits on a lower resolution proxy of a high higher resolution image; generate commands corresponding to edits made on the proxy; and upload the commands to a server as a batch.

12.(currently amended) The network client of claim 11, wherein the network client is programmed to perform ~~performs~~ the image edits by displaying the proxy, receiving image edit inputs; overlaying a grid on the proxy, and using grid elements to compute commands in response to the image edit inputs.

13.(currently amended) A network client comprising:  
means for accessing a proxy of an image;  
means for generating commands corresponding to edits on the proxy; and  
means for uploading the commands to a server as a batch.

14.(currently amended) A system comprising:  
a client for requesting a digital image to edit; and  
a server for sending a proxy of the image to the client in response to the client request; and  
the client returning a batch of image editing commands to the server, the commands corresponding to edits performed on the proxy by the client.

15.(original) An image editing program for generating a batch of commands corresponding to edits on an image; and uploading the commands as a batch on a network after the image has been edited.

16.(currently amended) An article for a network client, the article comprising:

computer memory; and

a program stored in the memory, the program, when executed, instructing the network client to generate a batch of commands corresponding to edits on an image; and upload the commands to a server as a batch.

17.(original) The article of claim 16, wherein the program further instructs the network client to receive and display a proxy of the image, receive edit inputs, and edit the displayed proxy according to the edit inputs.

18.(currently amended) An article for a server, the article comprising:  
computer memory; and

A.  
a program stored in the memory, the program, when executed, instructing the server to transmit an image editing program and a lower resolution proxy of a higher resolution image to a client; ~~the program further instructing the server to and await a batch of commands for editing the higher resolution image.~~

19.(currently amended) The article of claim 18, wherein the program further instructs the server to use ~~the~~ a batch of commands received from the client to edit the higher resolution image.

20.(currently amended) The article of claim 18, wherein the program further instructs the server to store ~~the~~ a batch of commands received from the client ~~that have been received~~ as an edit history.

21.(original) The article of claim 20, wherein the program further instructs the server to use the edit history to roll back changes in response to a client request.

22.(currently amended) A method of performing on-line editing of an image, the method comprising:  
a client accessing a proxy of the image;

the client generating commands corresponding to edits on the proxy; and  
the client uploading the commands to a server as a batch.

23.(original) The method of claim 22, wherein accessing the proxy includes receiving the proxy on-line and displaying the received proxy.

24.(currently amended) A method of performing on-line editing of an image, the method comprising:

a server transmitting a lower resolution proxy of a ~~high~~ higher resolution image to a client; and

the server transmitting an image editing program to the client, the image editing program including programming for generating a batch of commands when used to edit the proxy.

25.(currently amended) The method of claim 24, further comprising the server awaiting the receipt of a batch of commands from the client.

26.(currently amended) The method of claim 25, further comprising the server receiving and using the batch of commands to edit the ~~high~~ higher resolution image.

27.(original) The method of claim 26, further comprising storing the commands that have been used as an edit history.

28.(original) The method of claim 27, further comprising using the edit history to roll back changes in response to a client request.
